Electric Companies are changing December 1, Nodal vs Zonal

By: Mike Burkett, President, Joule Energy, LLC

The Electric Reliability Council of Texas (ERCOT) manages the electricity grid in Texas and is scheduled to launch its nodal pricing system on December 1, 2010. The nodal system replaces the current zonal pricing system. The new system has been in planning and design for more than seven years at a cost of over \$500,000,000.

The current zonal system prices electricity at five different "zones" around the state. The new zonal system will replace those zones with 500 resource "nodes", 13 zones, and four hubs. The new system completely changes the way the 130 Retail Electric Providers (REPs) in the state of Texas do business. Many of them may not be prepared.

Slightly more than half of the REPs have attended one or more of ERCOT's nodal market training courses. ERCOT has provided training since 2006. It's hard to tell how prepared most REPs will be once nodal goes live.

There is a real risk that some of the REPs will not accurately hedge for the pricing volatility and will either pass these costs through to the consumer or sustain crippling capital calls resulting in bankruptcy for some of the REPs.

Customers with less than 50 KW of demand should not have these costs passed thru. For customers with greater than 50 KW of demand, now is the time to renegotiate your electric contract to insure you don't get stung.

Joule Energy, LLC is an electricity advisor and broker to business and property owners in Texas. Mike.Burkett@JouleEnergyLLC.com

The Cantrell Company specializes in the brokerage of multi-family properties. Please contact the apartment specialists below for exclusive representation for the sale of your apartment property or for your next purchase.
